

## Chattahoochee Chair

## Materials

- 7 1" x 4" - 8' treated lumber (4' waste)
- or
- 5 4" x 4" - 8' treated lumber, and
- 1 4" x 4" - 12' (4' waste)

When choosing treated lumber for any outdoor residential project, be sure the preservative used and grade of lumber are appropriate for your intended application.

Use hot-dipped galvanized fasteners (meeting ASTM A 153) and connectors (ASTM A 653 Class G185 sheet), or better, for protection against the effects of moisture often present where treated wood is used.

Aluminum should not be used in direct contact with treated wood. When using aluminum, a protective physical barrier should be used to separate the aluminum from the treated wood.
